Graupner M., Xu H., White R.H.;
"Identification of an archaeal 2-hydroxy acid dehydrogenase catalyzing
"Identification of an archaeal 2-hydroxy acid dehydrogenase catalyzing
"reactions involved in coenzyme biosynthesis in methanoarchaea.";
J. Bacteriol. 182:3688-3692(2000).
-I- FUNCTION: Acts on oxaloacetate, sulfopyruvate but not on pyruvate.
Has a higher selectivity for the coenzyme NADH than for NADPH.
Has a higher selectivity for the coenzyme NADH than for NADPH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MDH_METFE P16142;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright. New peptide conjugates

for modulating apoptosis or

for inhibiting

```
CC The invention relates to a peptide conjugate having the formula:

CC (R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached con the N-terminus of the peptide, or a side chain of the peptide where ct the functional group of the side chain is NH2 or OH; or X = O or NH,

CC when the R-X group is attached to the C-terminus of the peptide, or a consider chain of the peptide where con two double bonds, cyclobutyl, cyclopentyl, cyclohexyl containing one cor two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally consubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides AB37001 = B37058 represent examples cof the peptide portion of the conjugate. The peptides represent analogues of the BH3 domain of the cell death agonist Bad. The peptide conjugate is captured for modulating apoptosis in the cells of a subject, or for creversing B cell lymphoma/leukemia 2 (Bcl-2) imediated blockage of captured with a cancer characterized by cancer cells that cancer characterized by cancer cells that cancer characterized by cancer cells that cancer characterized by cancer cells that or conjugate is also useful for inhibiting Bcl-2 conjugate is also useful for treating a caute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is action and peptide conjugate is set of conjugate is also useful for treating accomplisate is also useful for treating disorders characterized by increased apoptosis, e.g. neurodegenerative disorders, acquired conjugate is also useful for captired being approach to the cancer characterized by cancer cells infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The invention relates to a bcl homology domain 3 (BH3 domain), derived from a proapoptotic member of the BCL-2 family. The BH3 polypeptide can be used in a method for promoting apoptosis in a target cell, especially where the cell is a cancer cell a virus infected cell or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conditions, arthritis, inflammation, and autoimmune diseases, which may result from the down regulation of cell death
                                                                             Claim 18;
                                                                                                   New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer

0

The invention relates to a peptide conjugate having the formula: (R-X), D peptide where n=1-10; X=C=0, when the R-X group is att to the N-terminus of the peptide, or a side chain of the peptide the functional group of the side chain is NH2 or OH; or X=0 or when the R-X group is attached to the C-terminus of the peptide,

The peptides ABB37001-B37058 represent examples CC of the peptide portion of the conjugate. The peptides represent analogues CC of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of CC the BBB domain of the cell death agonist Bad. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for CC reversing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 CC function. In particular, the peptide conjugate is useful for treating a CC subject afflicted with a cancer characterized by cancer cells that CC express Bcl-2. The cancer includes prostate, colorectal, gastric, CC non-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or caute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders characterized by immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The present sequence was used in an example illustrating an invention relating to an antimycin derivative which modulates apoptosis by binding to a Bcl-2 family protein and preferentially induces apoptosis in a cell which over-expresses the Bcl-2 family protein. The antimycin derivative is used in treating an apoptosis-associated disease and for inducing apoptosis. It is also useful for treating neoplasia and drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mammalia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bak BH3 peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          resistance. The present sequence binds to the hydrophobic pocket of Bcl-2. A competitive binding assay was used to determine if the site of antimycin A3 interaction was the hydrophobic pocket of Bcl-2.
                                                                                                                                                          The present sequence is the mammalian Bak Bcl-2 homology domain 3 (BH3) domain, which was used in a sequence alignment with the same domain of a putative version of the mammalian apoptosis regulator BBC3, which was designated BBC3-ORF2. The BBC3 protein, nucleic acids and antibodies are suitable for use in promoting cell death or for preventing apoptosis in malignant cells and those causes.
                                                                                                                                                                                                                                                                                    Novel polynucleotide encoding a BBC3 protein which is useful for modulating apoptosis, especially in the treatment of cancer and autoimmune diseases .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11-MAY-2000

                                                                                                                                                                                                                                       В
                                                                                                         S
                                                                                                                                                                                                                                                                                  The present invention describes an isolated or synthetic polypeptide (C) comprising a less than full length amino acid sequence of a mutant C Bcl-XL/Bcl-2 associated cell death regulator polypeptide (BAD) or its C fragment, which contains amino acid substitutions at Seril8 of a human RAD, SeriS5 of a murine BAD) (longer murine BAD) or Seril3 of a murine BAD). (I) has immunostimulant, neuroprotective, CC nootropic, antlischaemic, vulnerary, cytostatic, antiviral, and c can be used as an apoptosis inducer or inhibitor. BAD polypeptides and CC polynucleotides can be used for screening candidate compounds and drugs for activity that promote cell survival or apoptosis. Other uses include C inducing or inhibiting apoptosis in a cell. Candidate compounds and drugs (dentified and (mutant) BAD polypeptides are useful in treating immunodeficiency diseases, neurodegenerative diseases, ischaemic cell ymphoproliferative conditions, arthritis, infertility, inflammation and cutcimmune diseases. The present sequence represents a Bcl-family member BH3 domain consensus sequence which is used in an example from the
                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New mutant Bcl-XL/Bcl-2 Associated Cell Death Regulator polypeptide, useful for screening for candidate compounds which induce or inhibit apoptosis, comprises amino acid substitutions at Seril8, Seri55 or Seri13 -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bcl-XL/Bcl-2 associated cell death regulator; BAD; mutant; apoptosis; immunostimulant; neuroprotective; nootropic; antiischaemic; vulnerary; cytostatic; antiviral; antiarthrito; antiviral; antiarthrito; antiviral; antiarthrito; antiviral; antiarthrito; cantingiamancory; wound healing; immunosuppressive; apoptosis inducer; apoptosis inhibitor; cancer; immunodeficiency disease; neurodegenerative disease; viral infection; ischaemic cell death; areprission cell death; areprission cell death; areprission; autoimmune disease.
                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 2; Fig 3a; 157pp; English.

The invention relates to a peptide conjugate having the formula:

CC (R-X)n-peptide where n = 1-10; X = C-0, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where CC the functional group of the side chain is NH2 or OH; or X = O or NH; CC when the R-X group is attached to the C-terminus of the peptide, or a CC side chain of the peptide where the side chain functional group is COOH CC or two double bonds, cyclobutyl, cyclopentyl, cyclobaxyl optionally monosubstituted with a 1-5C straight or branched chain of the peptide where the group is COOH CC phenyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group, co for two double portion of the peptides AB37001-B3705B represent examples CC of the peptide portion of the conjugate. The peptides represent analogues of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of CC the BH3 domain of the cells death agonist Bad. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for CC apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 CC function. In particular, the peptide conjugate is useful for treating a subject afflicted with a cancer characterized by cancer cells that conjugate is also useful for inhibiting Bcl-2. The cancer includes prostate, colorectal, gastric, constant proposals, e.g. neurodegenerative disorders, acquired by immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cencer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS;

                                                                                                                                                                                                                                                                            capable of mimicking its structure and/or function. The present sequence represents a GD domain corresponding to amino acid residues 67-94 of Bak. An antibody raised against a GD domain may be used to screen a cDNA expression library for clones comprising cDNA inserts encoding immunocrossreactive proteins. Truncated GD domain meptides have been shown to maintain the protein binding and cell killing function exhibited by wild type Bak. These molecules may induce apoptosis in tumour cell. These peptides act independently of p53 status. Bak or GD domain mimetics that inhibit Bcl-2 may be selectively toxic to certain tumours, e.g. follicular lymphoma, which depend on high levels of Bcl-2 for their continued growth and survival. GD domain mimetics may also be used for combatting viral infections by causing apoptosis of infected cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                               The term GD domain refers to a protein domain first identified in Bak and shown to be essential for the interaction of Bak with Bcl-x(L) and for Bak's cell killing function; and to peptides and/or molecules capable of mimicking its structure and/or function. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GD domain region for Bak amino acid residues 67-94.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAW06294;

                                                                                                                                                                                                                                                                                                                                                                                                                                 This is the amino acid sequence of Bak-delta2-TM, a truncated polypeptide comprising amino acids 71-187 of Bak (see AAW79534). A nucleotide sequence encoding Bak-delta2-TM was obtained from cDNA by PCR and cloned as an in-frame fusion to the GAL4-DNA binding domain in vector pAS2-1. The construct was used in a two-hybrid screen of human heart cDNA for the identification of clones encoding Bak binding proteins. The invention relates to a novel Bak binding protein (BBP, see AAW79537), the gene encoding (see AAV61499), methods for detecting substances that alter the specific binding between Bak and BBP, as well as diagnostic and therapeutic methods utilising BBP.

Deletion of the N-terminal 70 amino acids of Cdn-1 improved this activity, suggesting that small, truncated Cdn-1 molecules may be potent therapeutics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid sequences encoding Cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injur
         etc.

                                                                                     Cdn-1 cDNA was isolated from a human heart cDNA library using a previously isolated clone as probe. Recombinant Cdn-I was produced in Sf9 and human colon adenocarcinoma HT29 cells. Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis.
                                                                                                                                                                                                  New nucleic acid sequences encoding Cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury
                                                                                                                                                                                                                                                                                          Barr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis. Deletion of the N-terminal 59 amino acids of Cdn-1 only slightly decreased this activity, suggesting that small, truncated Cdn-1 molecules may be potent therapeutics.
                                                                                                                                                                                                                                                                                                                                          07-OCT-1994;

                                                                                                                                                                                                                                                                                                                                                                                                                              Cdn-2 cDNA was isold. from a human placental genomic library using a 950 bp fragment of Cdn-1 cDNA. Expression of Cdn-2 in mouse progenitor B-cell FL5.12 cells decreased IL-3 induced apoptosis. The Cdn-2 protein displayed 97% amino acid identity with Cdn-1 (AAR77876).

The protein may be used in complete or partial form, or as an epitope tag fusion protein, in a new virucide drug screening method, which involves combination of Bak protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Epstein-Barr virus; BHRFI; fusion protein; epitope tag; drug screening; co-precipitation; ELISA; immunoassay; antibody. protein interactive trapping; virucide; antitumour; diagnostic

                                                                                                                                                                                                                                                            This Bak-2 protein sequence represents a bcl-1 homologue which interacts with Epstein-Barr virus (EBV) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion protein, in a new virucide drug screening method, which involves combination of Bak-2 protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak-2 and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or diagnostic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Screening for anti-viral agents - by detecting the ability of an agent to disrupt the interaction of a Bak protein and a viral protein

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
